

# Data Access Studio™: reporting for JD Edwards EnterpriseOne and Worldsoftware

## The Issue: Difficult and time-consuming reporting tools

JD Edwards makes it easy to get data into the system. Getting data out the way *you* want it is another matter. Some reporting tools exist to bridge this gap, but most require the business user to have an unreasonable amount of technical knowledge. Faced with this dilemma, business users must either wait for the IT organization to write reports for them or use “brute force” to piece the data they need manually.

### KEY BENEFITS

*Integrated with JD Edwards EnterpriseOne and World applications*

*Deploys over the web or on your Windows machine for simple setup.*

*Allows the user to build custom reports on every table and business view*

*Real-time reporting*

*Applies all JD Edwards security*

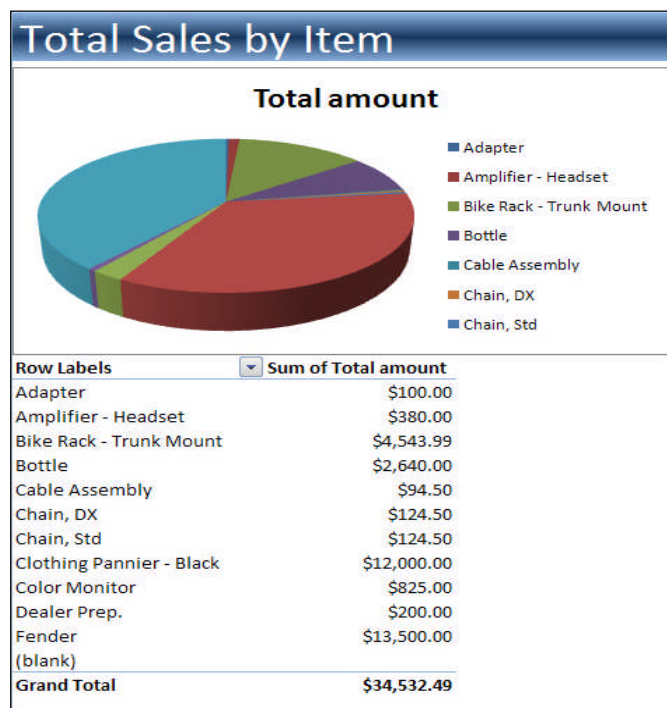

*Available in 10 languages*

*Schedule reports*

## The Solution: On-Demand Reporting™ by ReportsNow™

ReportsNow, an Oracle Certified Partner, provides a better reporting alternative for the JD Edwards business user. The true On-Demand Reporting capabilities of Data Access Studio™ allow the business user to design their own dashboards and reports without having to resort to the IT department. Business users design a report with a highly visual designer that shows how the report will look with data each step of the way. Users find Data Access Studio™ so intuitive that they are up and creating reports within one to two hours of online training.

Sample of Data Access Studio™ output

**Feature/Function Highlights right out of the box**

- ✓ Applies all native JD Edwards security (no ODBC!) and is integrated with the Data Dictionary
- ✓ Highly visual custom report designer to shape and format your report
- ✓ Create Dashboards, BI-Trending and understandable financial reports in a few clicks
- ✓ Export data with ease (Excel, pdf, HTML, XML, ...)
- ✓ Summarize and add Associated Descriptions on-the-fly
- ✓ Create your own Data Access Studio™ Business Views
- ✓ Publish reports to share meaningful information without waiting for your JD Edwards deployment cycle
- ✓ Standard user-friendly column descriptions
- ✓ Design and run reports over the Web
- ✓ Use the Report Scheduler to run your reports at night and distribute the output

**System Performance**

Data Access Studio™ does the following to maximize system performance:

- ✓ Generates the highest performing query possible
- ✓ Provides an “index assistant” which helps the user identify which columns will generate the fastest query
- ✓ Allows users to hide unnecessary table columns. Once hidden, Data Access Studio™ will only bring back data for the visible columns. The result of this is reduced network traffic, reduced database utilization, and increased speed.
- ✓ Allows an administrator to control which groups can do ad-hoc queries versus published queries.
- ✓ Consumes no JDE enterprise server resources.
- ✓ And more options are available to optimize performance.....

**Deployment Options**

You may deploy Data Access Studio™ to your enterprise in any of these ways:

- ✓ Data Access Studio™ Web Server
- ✓ Workstation
- ✓ Citrix

In the Data Access Studio™ Web Server, users are located in a Wide Area Network. Users run Data Access Studio™ from a web page link (hosted by IIS, Apache or other suitable web server). Data Access Studio™ consumes resources on DAS LAN server, the user's workstation, and the database.

In the Workstation deployment, users already have an E1 full client install. Your users install the Data Access Studio™ client to their workstations. Once installed, Data Access Studio™ runs entirely from the user's workstation - consuming resources only from the workstation and the database.

In the Citrix deployment, users do not have an E1 full client install and are typically located on a WAN. Once installed and published on Citrix, users dial in to the Citrix server to run Data Access Studio™. Data Access Studio™ consumes resources from the server and database.

**In Summary**

By providing breakthrough design simplicity, On-Demand Reporting™ by Data Access Studio™ lets the business user create reports that previously would not have been possible. With this new agility, businesses can adapt faster and more economically to the challenges they face.
